

Tendon transfers for ulnar nerve palsy

Caroline LECLERCQ, Institut de la main
Paris, France

Gruppo MANUS

Etiology

- **Distal palsy**
 - Nerve laceration at forearm & wrist
 - Neuromuscular diseases CMT, leprosy
 - Lower tetraplegia
- **Proximal palsy**
 - Nerve laceration at elbow and above
 - Lower brachial plexus injury
 - Iatrogenic...

Associated median-ulnar palsy

Paralysed muscles

Distal palsy

- Fingers
 - All interossei
Palmar and dorsal IO
Little finger (opp, ADM, FDM)
 - All lumbricals except 1st and 2nd
- Thumb
 - Adductor
 - +/- Flexor pollicis brevis

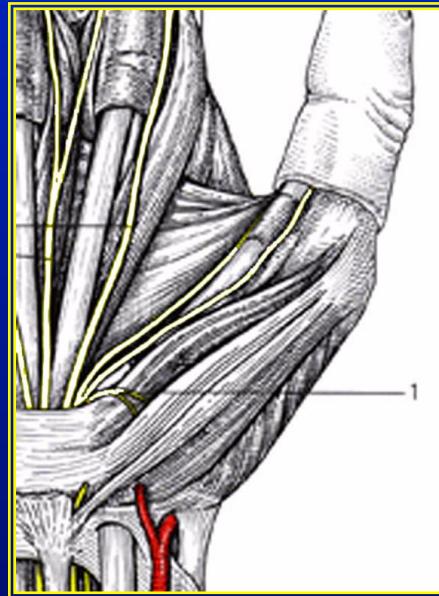

Flexor pollicis brevis nerve supply:

70%: median and ulnar nerve

→ thumb lacks only adduction

30%: ulnar nerve only

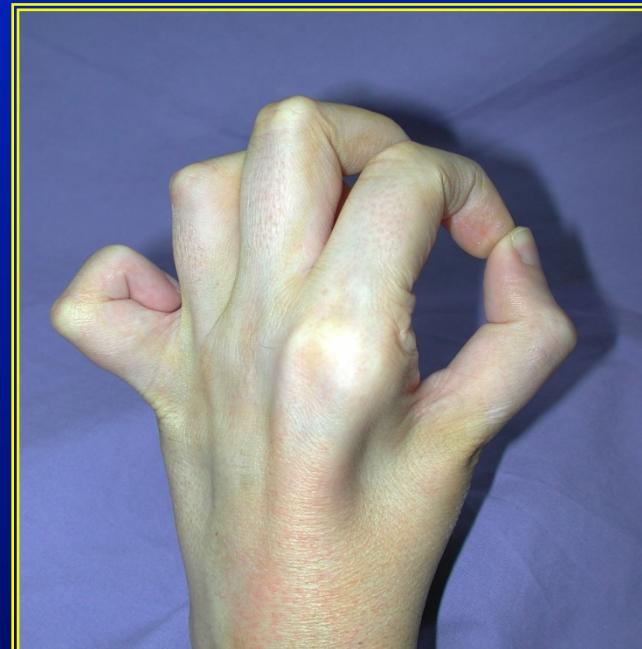

→ thumb lacks adduction and opposition

Flexor pollicis brevis testing

Forceful terminal pinch

-If MP hyperextends: FPB paralysed
(Jeanne's sign)

Flexor pollicis brevis testing

Forceful terminal pinch

- If MP hyperextends: FPB paralysed
(Jeanne's sign)
- If MP flexes: FPB intact

Paralysed muscles

Proximal palsy

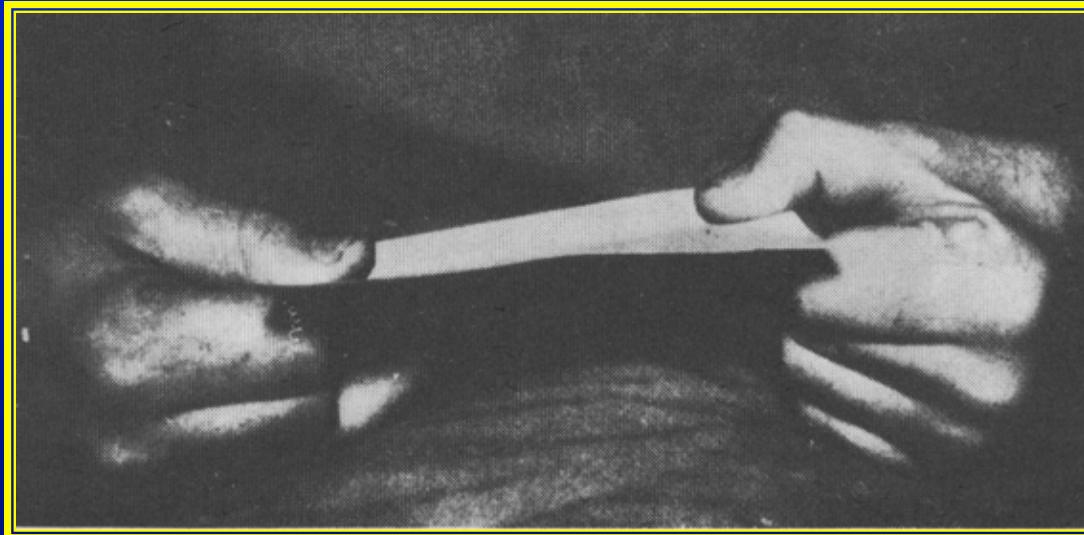

Same

+ ECU

+ Flexor Profundus 3-4-5

Clinical picture

Froment's sign

Clinical picture

Weak pinch:

Clinical picture

Weak pinch:

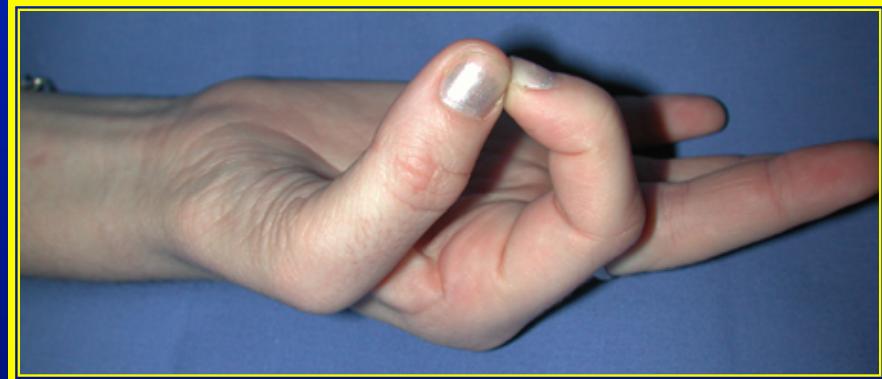

- Thumb supination (crank-handle)

Clinical picture

Weak pinch:

- Thumb supination (crank-handle)
- MP instability

Clinical picture

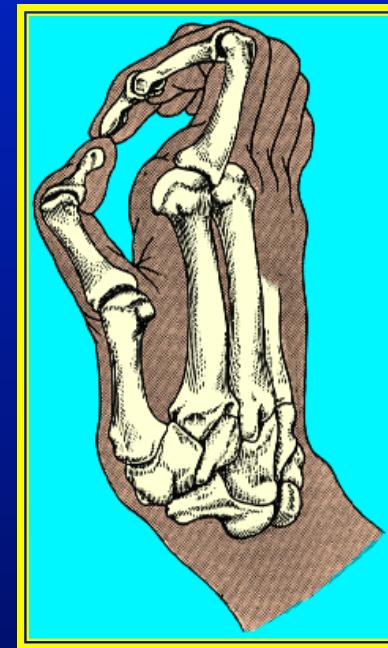

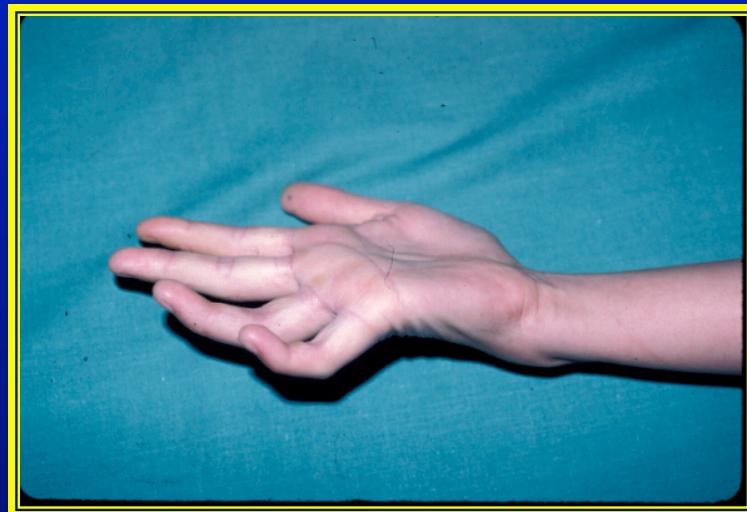

Weak pinch:

- Thumb supination (crank-handle)
- MP instability
- Index lack of abduction

Clinical picture

Ulnar clawing

Index and long fingers apparently normal, but clawing during strong grasp

Clinical picture

Ulnar clawing

Index and long fingers apparently normal, but clawing during strong grasp

Treatment

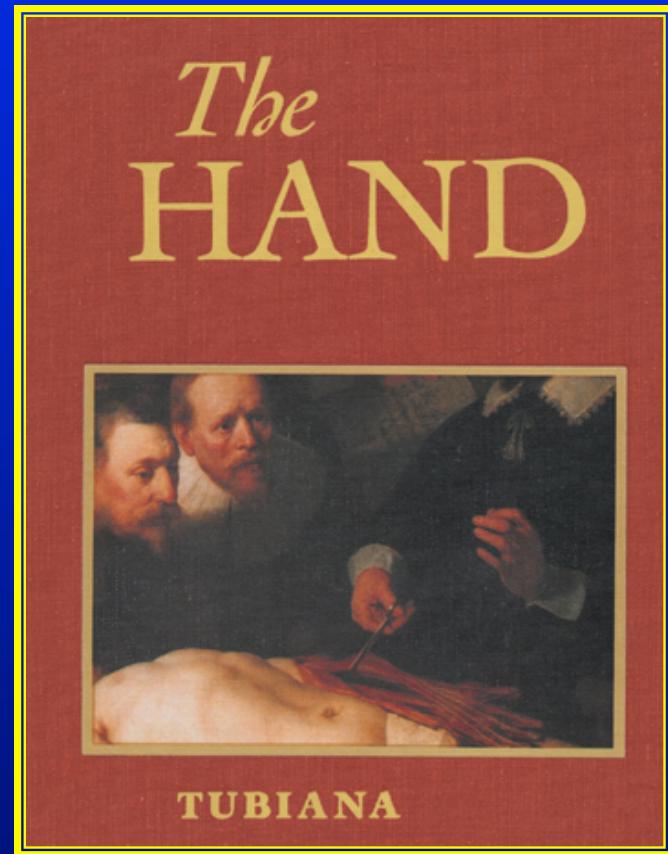

1. The thumb

2. Fingers

1- The thumb

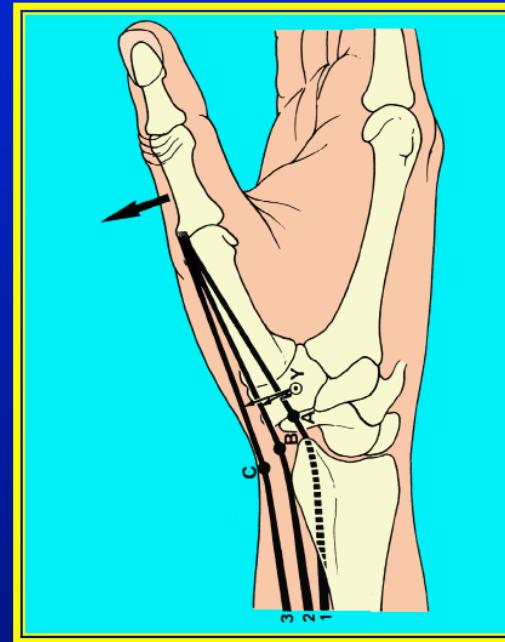

Tubiana 1973

- Lab dissections
- 250 thumb palsies

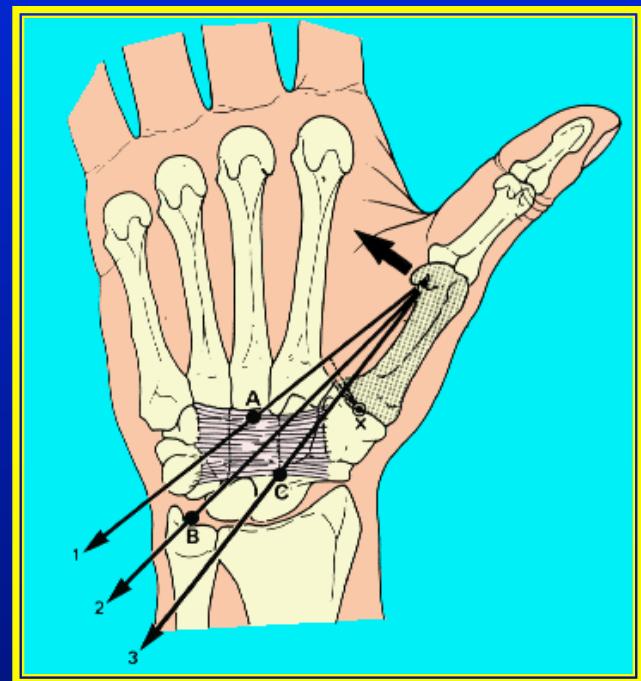

Direction of transfer and pulleys

- Superficial : anteposition
 - Deep : opposition

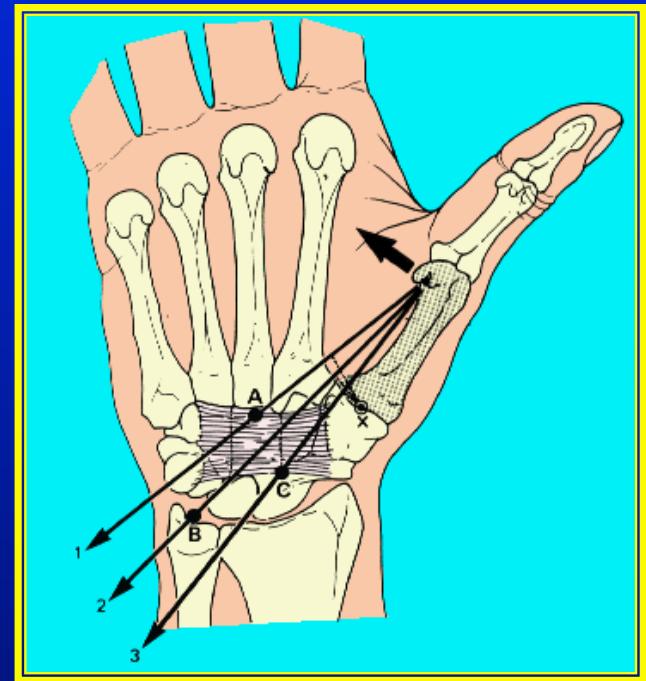

Direction of transfer and pulleys

- Superficial : anteposition
- Deep : opposition
- Radial : anteposition
- Ulnar : opposition

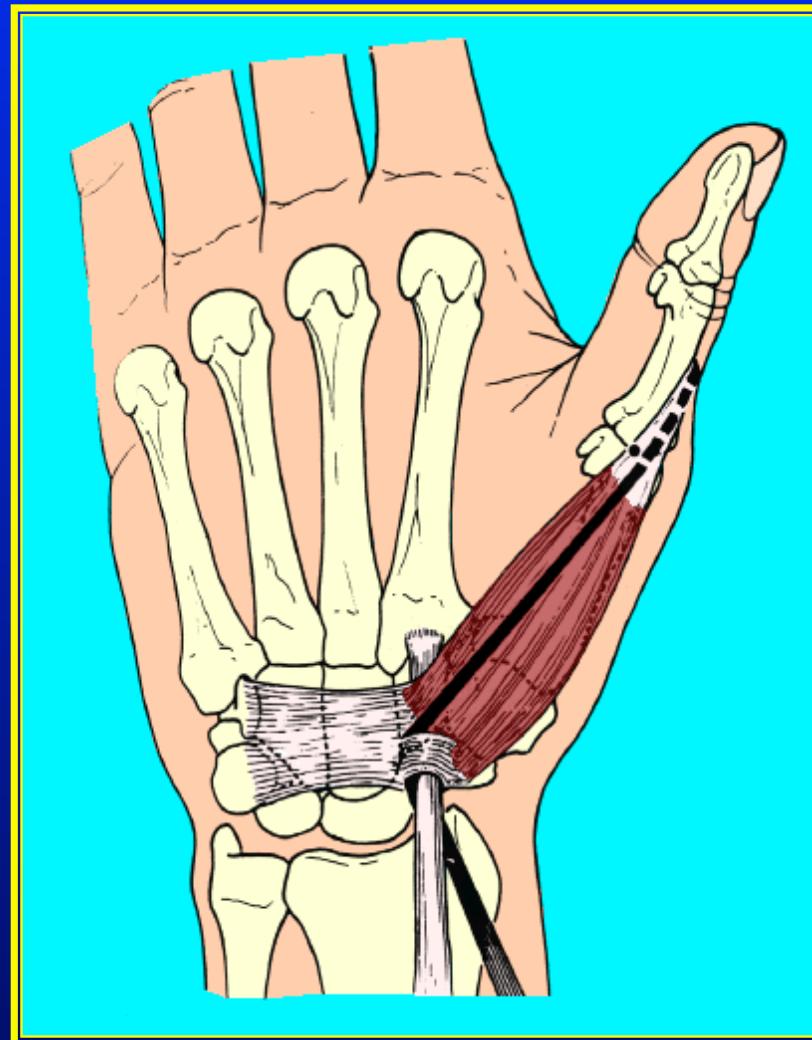

Direction of transfer and pulleys

- Superficial : anteposition
- Deep : opposition
- Radial : anteposition
- Ulnar : opposition
- Proximal : anteposition
- Distal : opposition

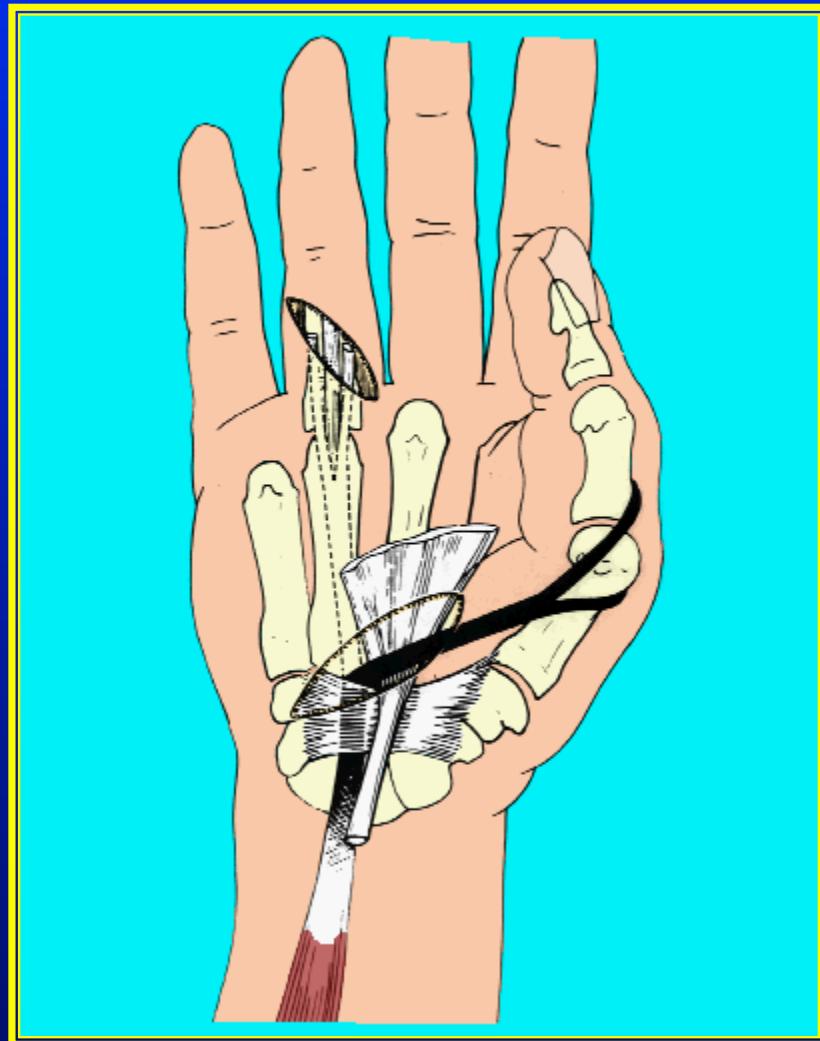

Examples

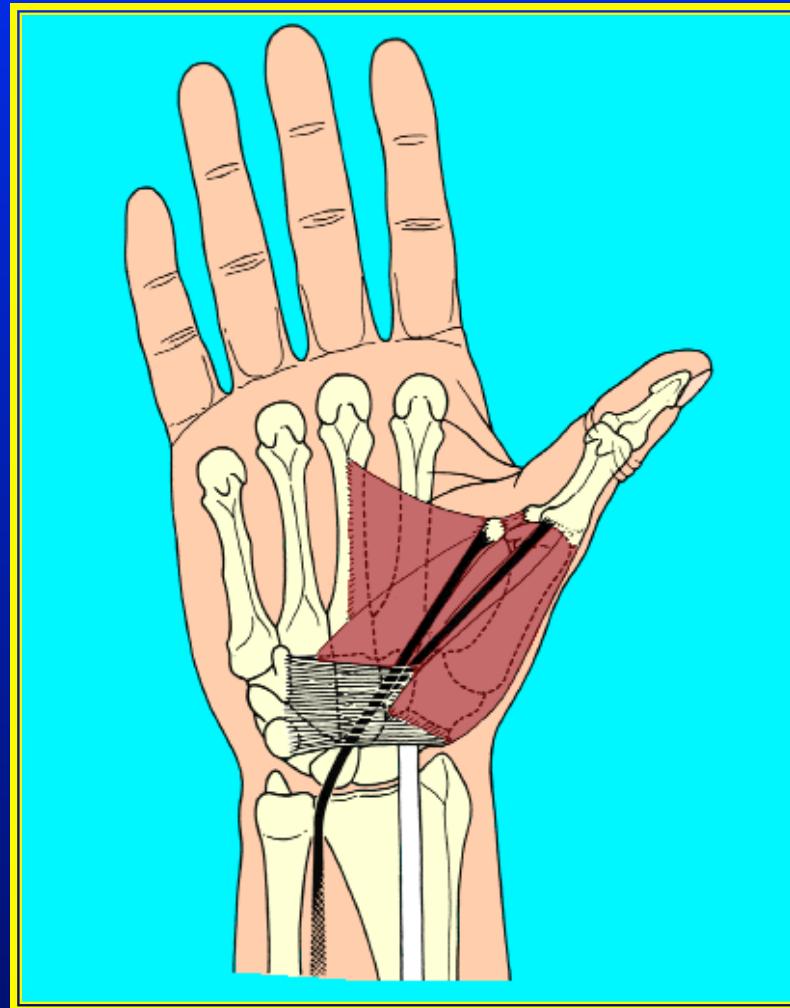

Zancolli

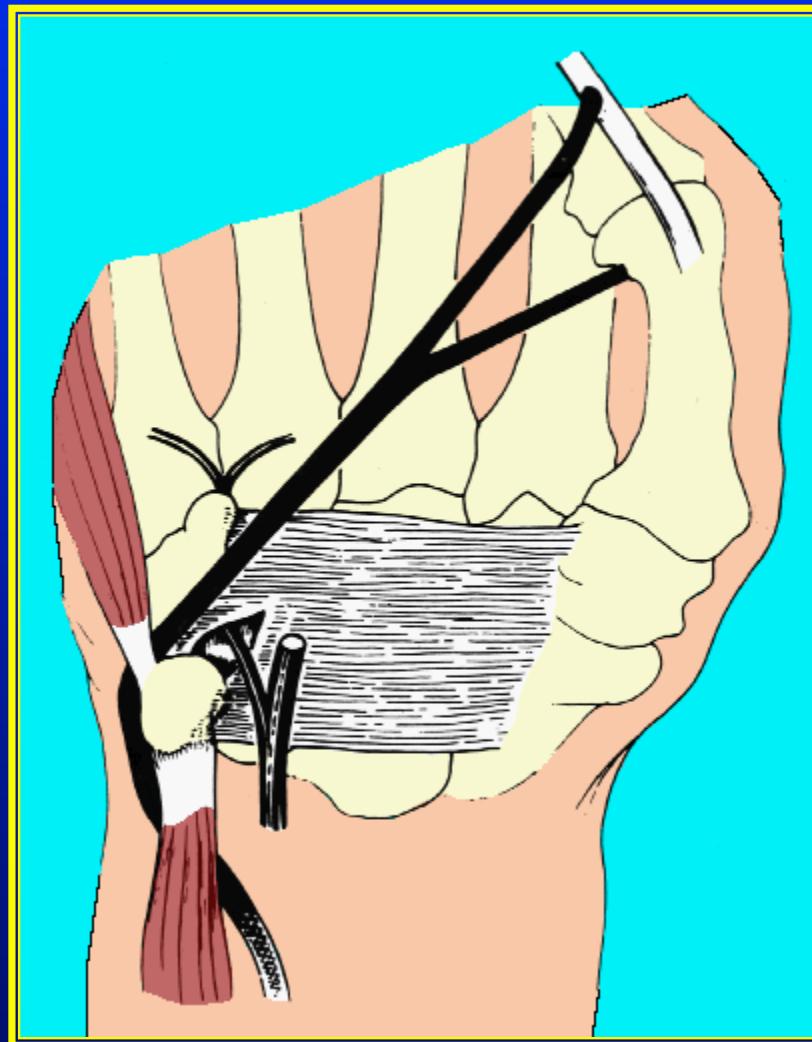

Thompson

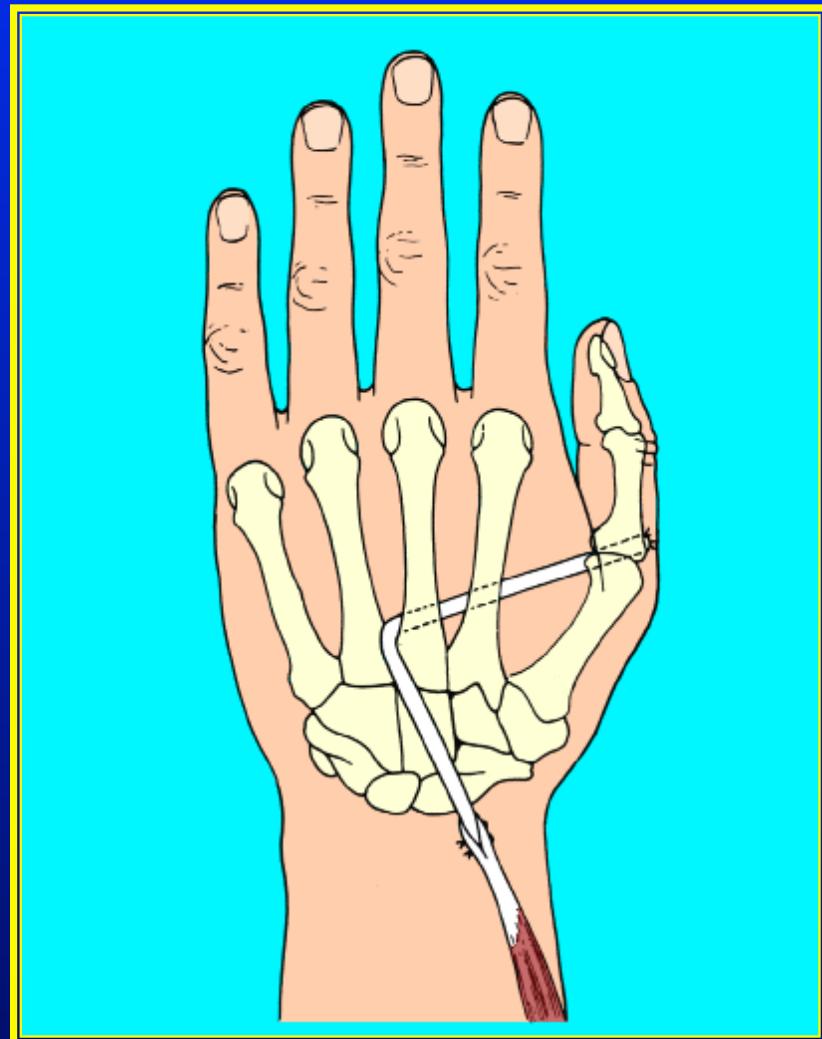

Royle-Thompson

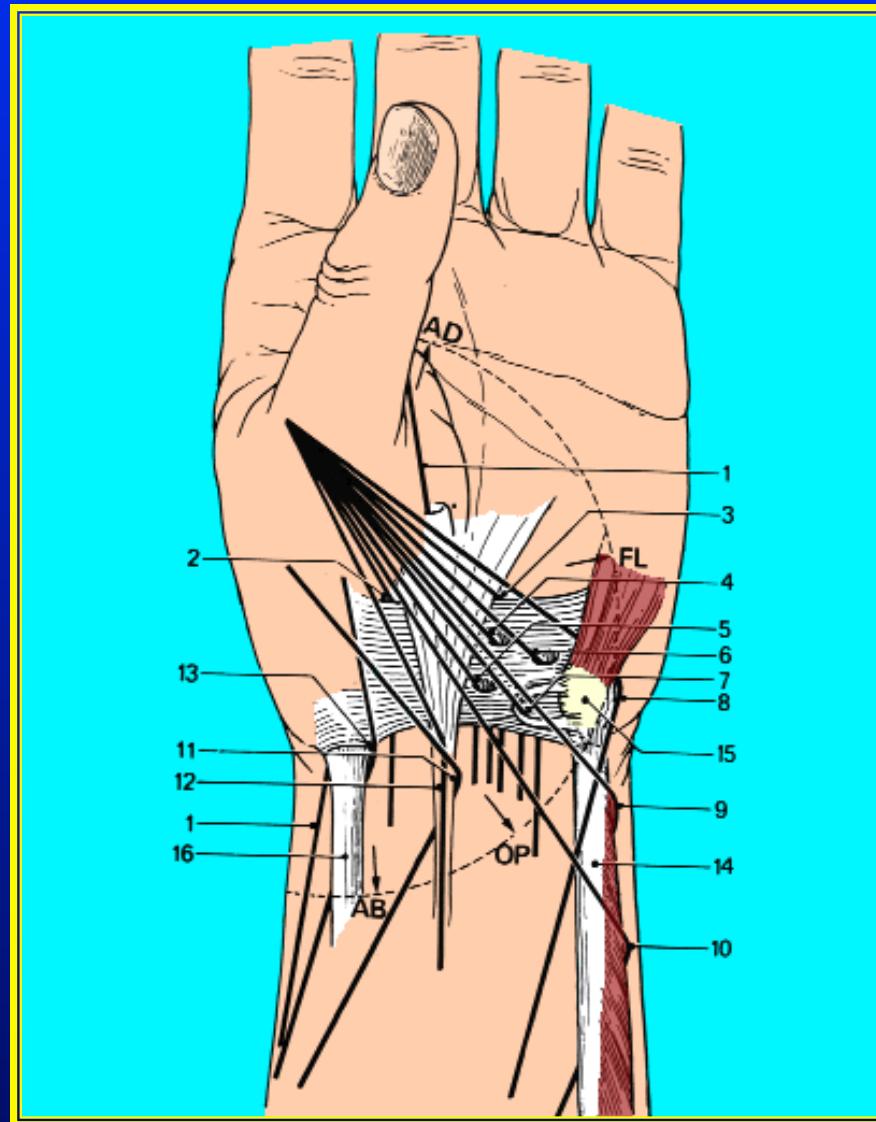

Palazzi

Alnot-Masquelet

Summary

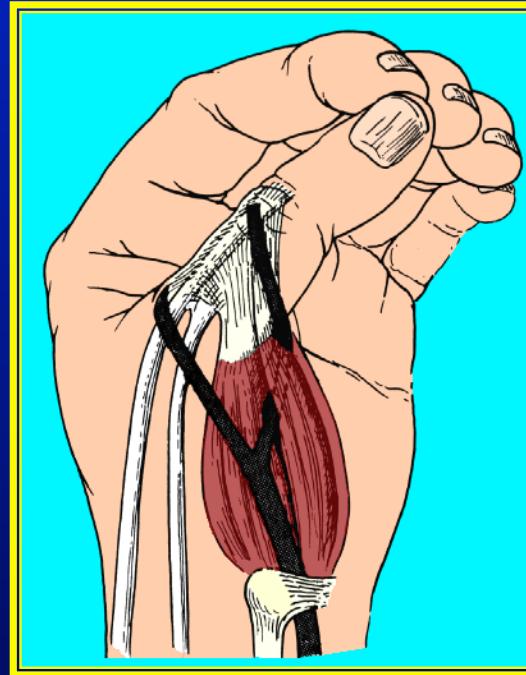

Distal fixation

- Radial aspect of thumb
 - Otherwise supination deformity

Distal fixation

- Radial aspect of thumb
 - Otherwise supination deformity
- If MP instability (FPB palsy)
 - Double fixation on each side of joint (Brand)

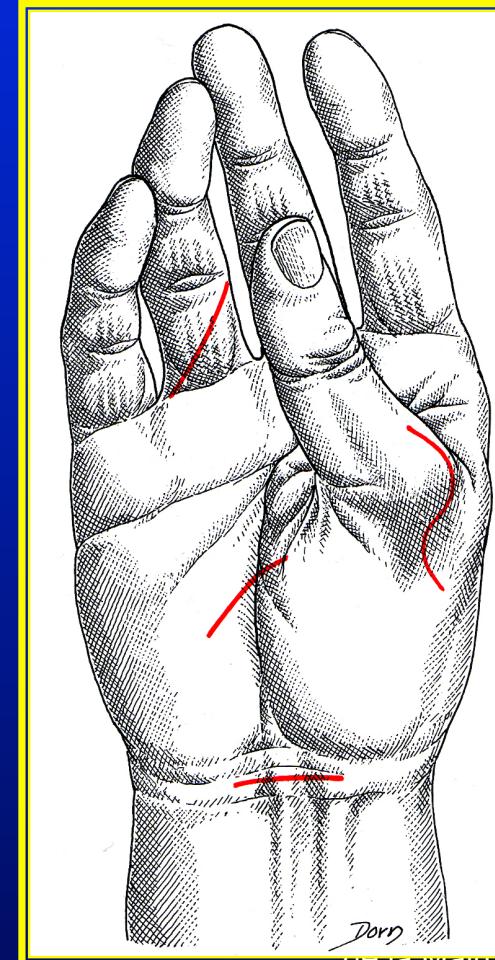

Motors

- FS ring finger (distal palsies)
- Extensor indicis proprius (EIP)
- Extensor digiti minimi (EDM)
- Extensor pollicis brevis (EPB) + MP Az
- Wrist motors +graft
- Brachioradialis

Preferred thumb transfer Distal palsy

1. FPB paralysed

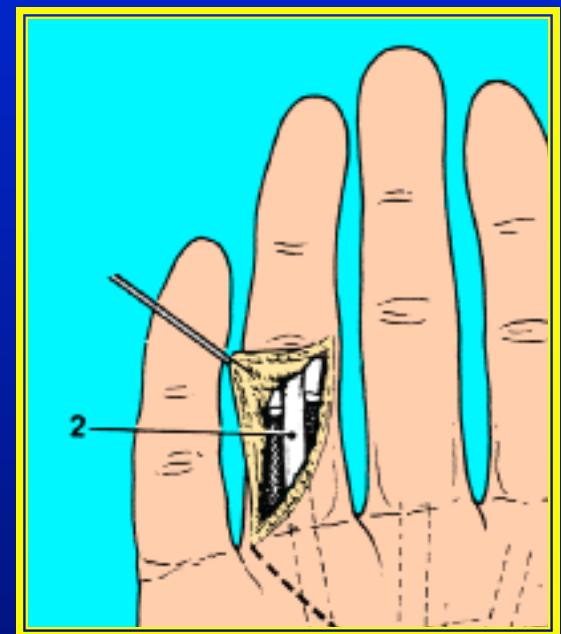

- Motor: FS4 : Royle-Thompson

Preferred method

Royle-Thompson

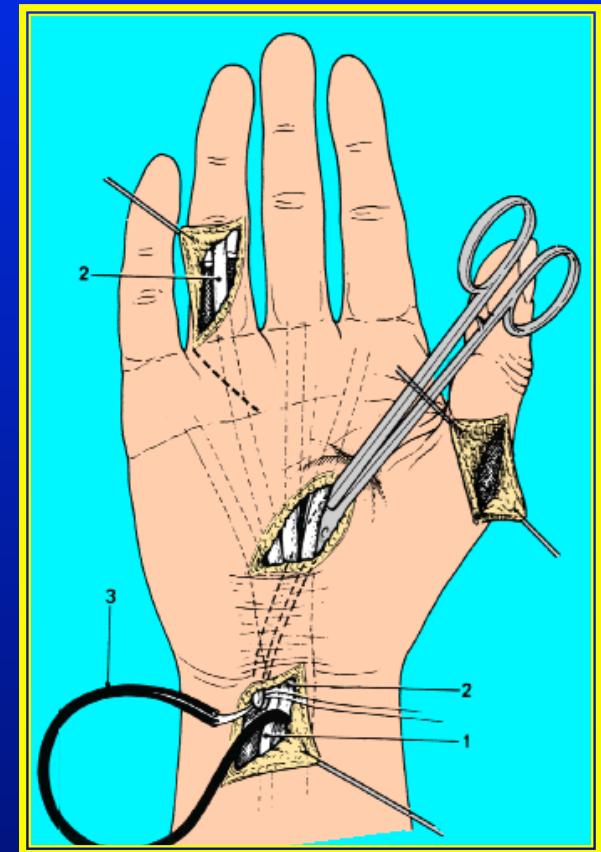

- FS 4 severed at PP

Preferred method

Royle-Thompson

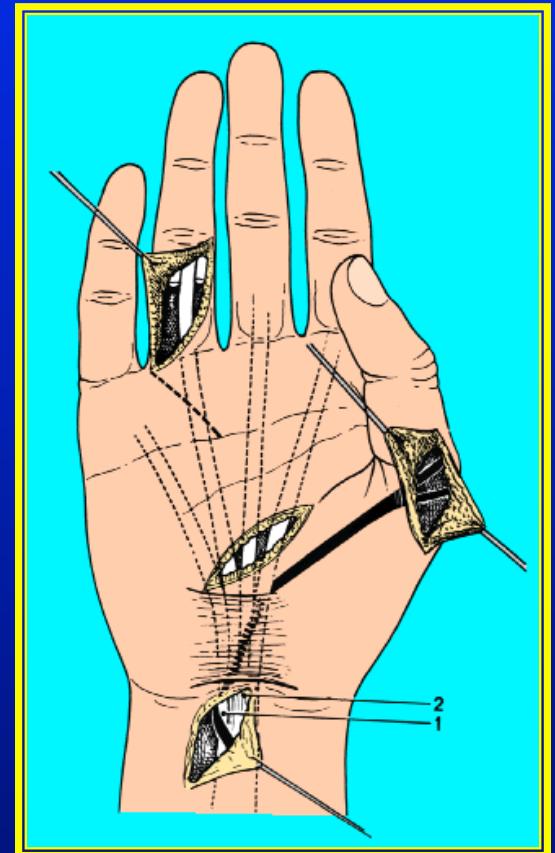

- FS 4 severed at PP
- exposed at wrist
- passed deep to flexor tendons

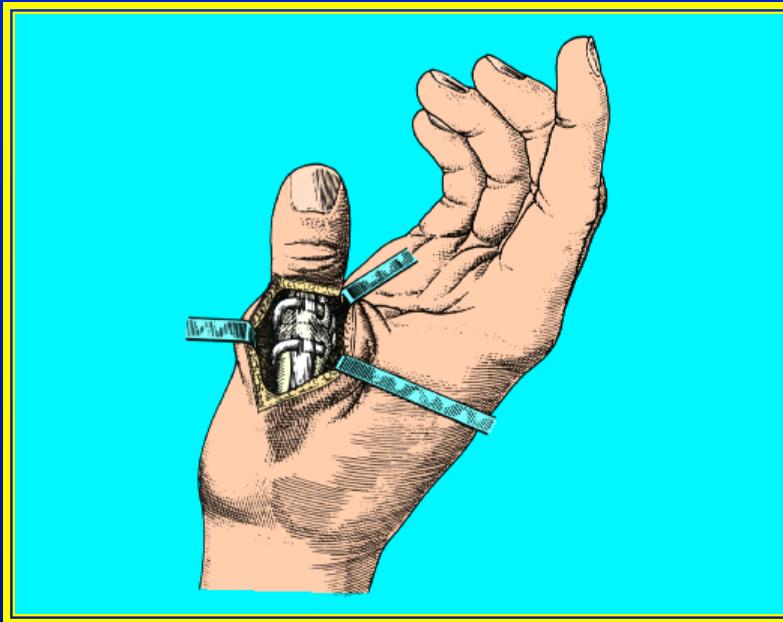

Preferred method

Royle-Thompson

- FS 4 severed at PP
- exposed at wrist
- passed deep to flexor tendons
- routed to thumb
- under neurovascular pedicles
- insertion radial aspect of MP

Distal fixation

Preferred method

Royle-Thompson

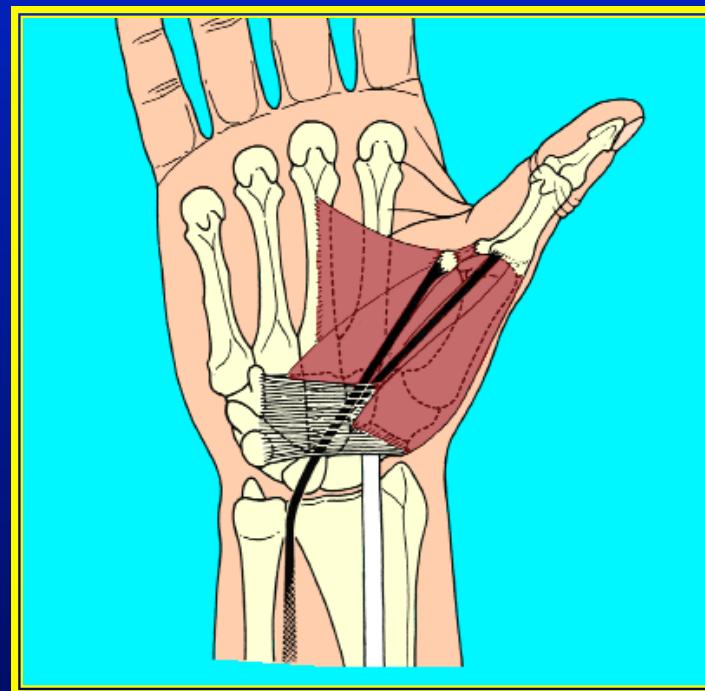

Preferred thumb transfer Distal palsy

2. FPB active

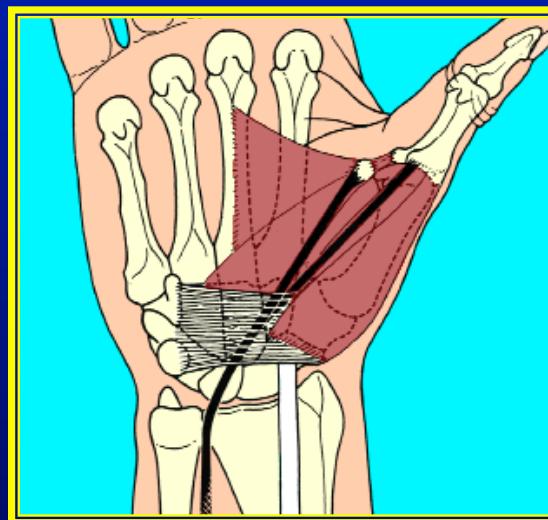

- Motor:
 - FS4
 - Or EIP through interosseous membrane

Preferred thumb transfer Distal palsy

2. FPB active

- Alternative:
 - EIP through interosseous membrane
- Distal fixation
 - Adductor (sesamoid) and radial MP

Distal median-ulnar palsy

Clawing of all finger

Complete palsy of thumb intrinsics

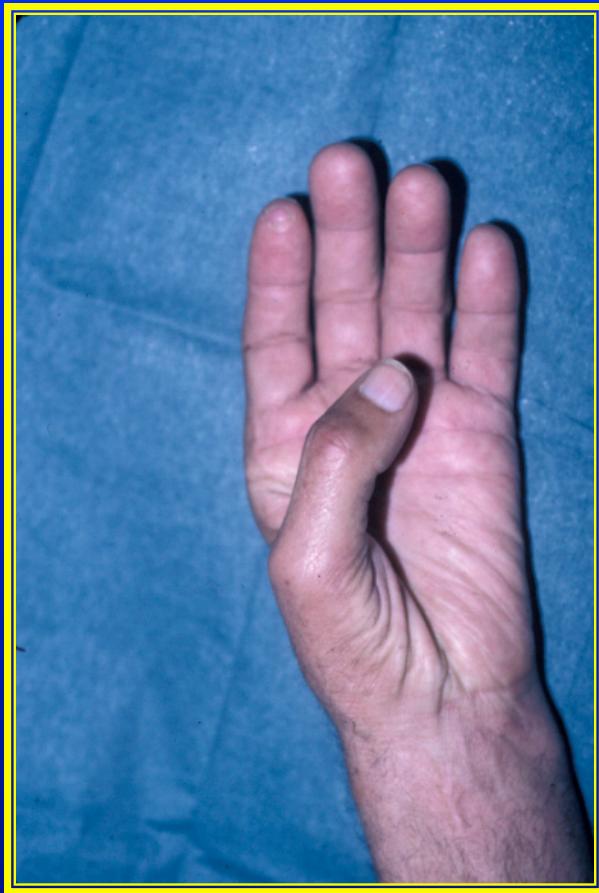

Distal median-ulnar palsy

Two transfers if available

- opposition
 - FS4
- anteposition
 - EIP (EDM) around ulnar border

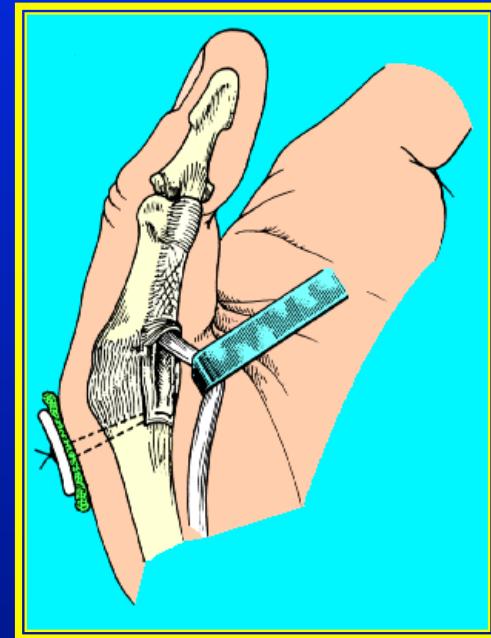

Thumb Proximal palsy

- FS4 and 5 not available
- EIP through interosseous membrane
Neither long nor strong enough for MP stabilization:
additional procedures

Thumb Proximal palsy

additional procedures

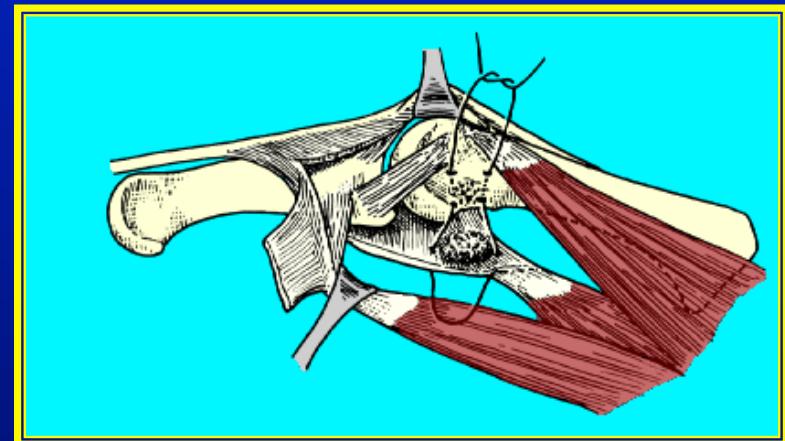

- MP capsulodesis

Thumb Proximal palsy

additional procedures

- MP capsulodesis
- sesamoïdo-metacarpal arthrodesis

Thumb Proximal palsy

additional procedures

- MP capsulodesis
- sesamoïdo-metacarpal arthrodesis
- or MP arthrodesis and EPB to 1st dorsal interosseous

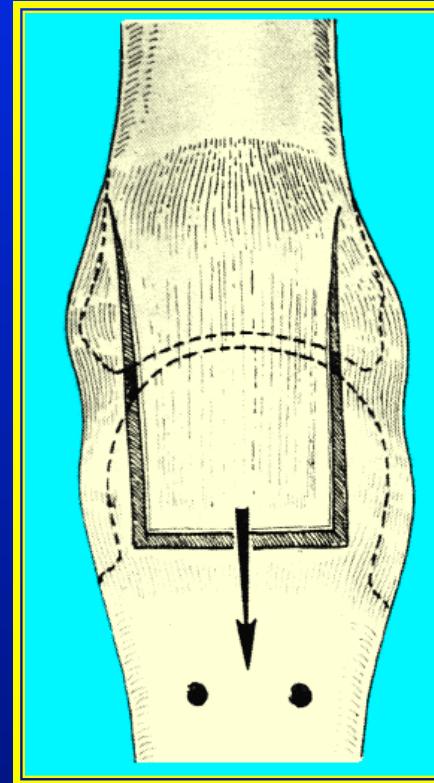

2- The fingers

Ulnar clawing

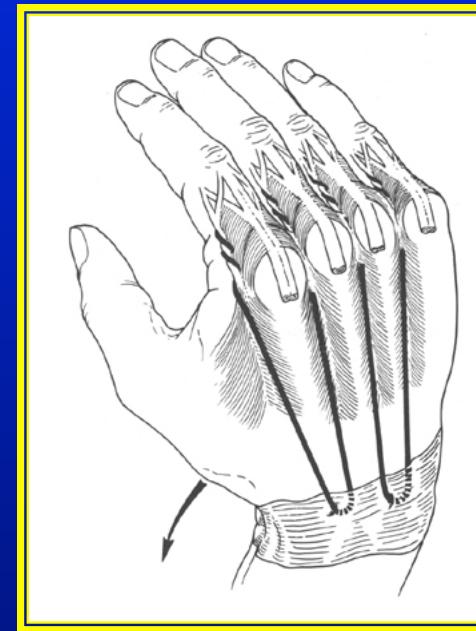

Index abduction

Ulnar clawing - Capsulodeses

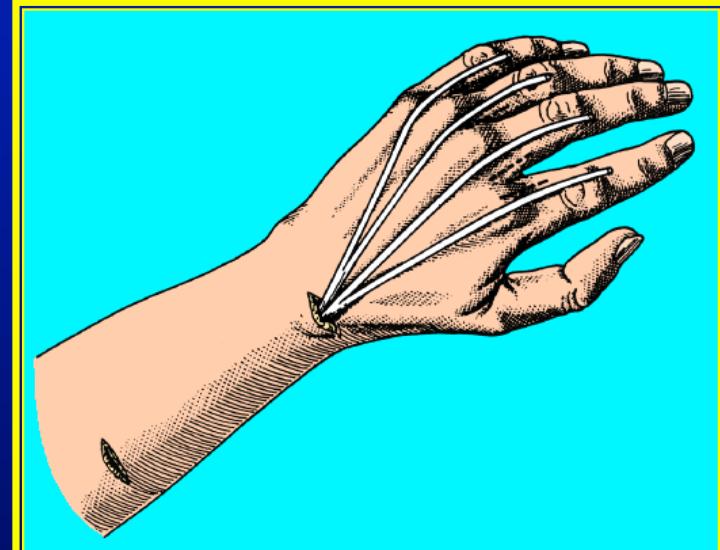

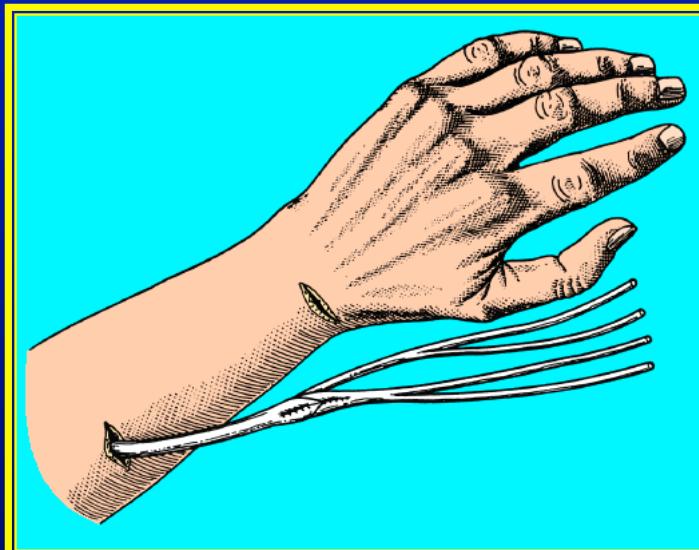

Ulnar clawing

- Capsulodeses
- Tenodeses (Fowler)

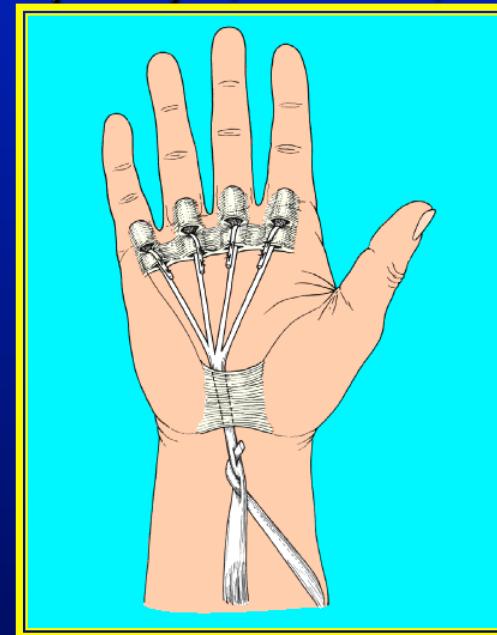

Ulnar clawing

- Capsulodeses
- Tenodeses (Fowler)
- Tendon transfers
 - Inserted dorsally (Brand)

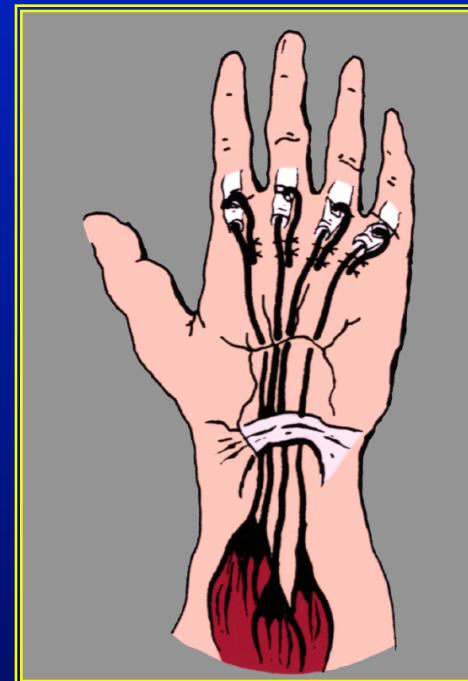

Ulnar clawing

- Capsulodeses
- Tenodeses (Fowler)
- Tendon transfers
 - Inserted dorsally (Brand)
 - Inserted palmarly A1 pulley (Zancolli)

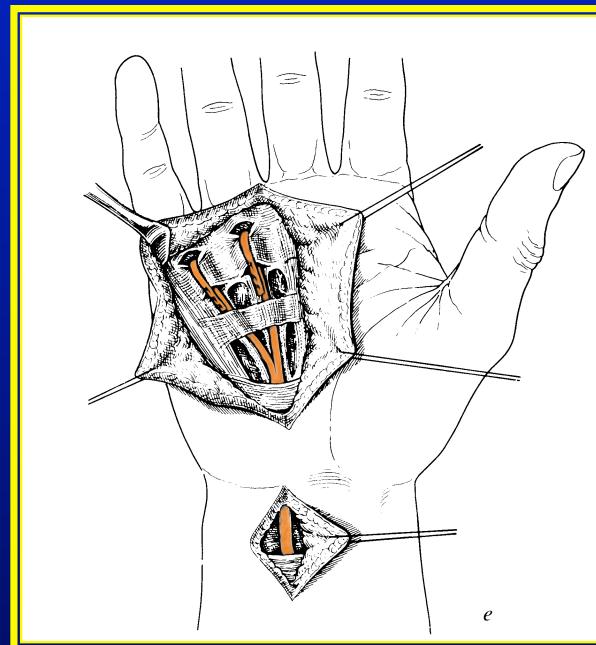

Lasso procedure Zancolli

- Direct lasso
 - With flexor superficialis FS4 / FS5
Not an option in proximal palsies

Lasso procedure Zancolli

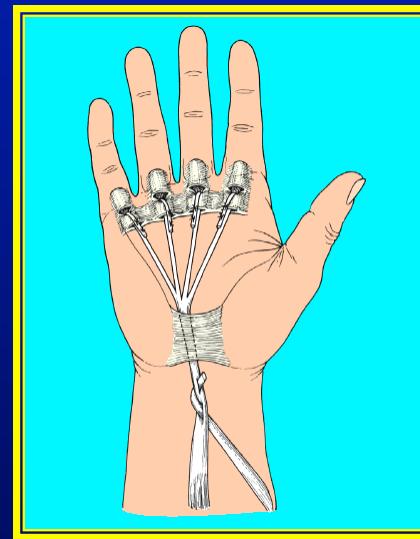

- Direct lasso
 - With flexor superficialis
 - With tendon transfer (EIP)

Lasso procedure

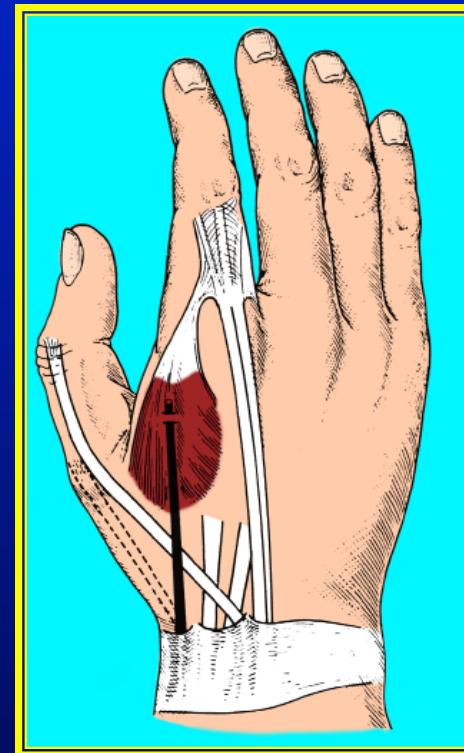

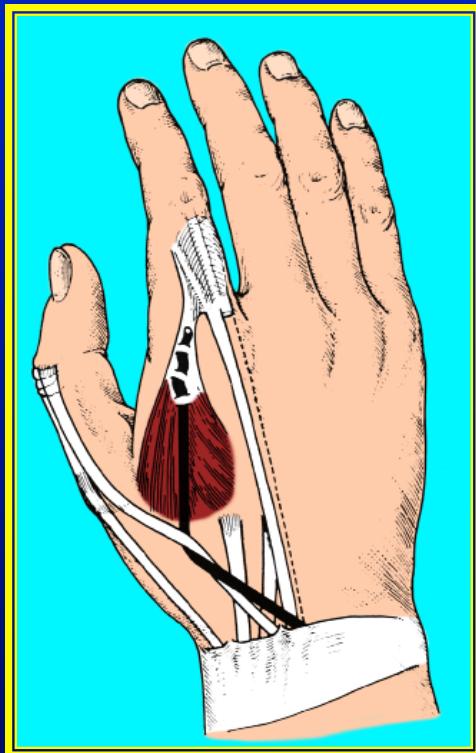

Zancolli

- Direct lasso
 - With flexor superficialis
 - With tendon transfer (EIP)
- Indirect lasso
 - Paralysed flexor superficialis + transfer

Index abduction

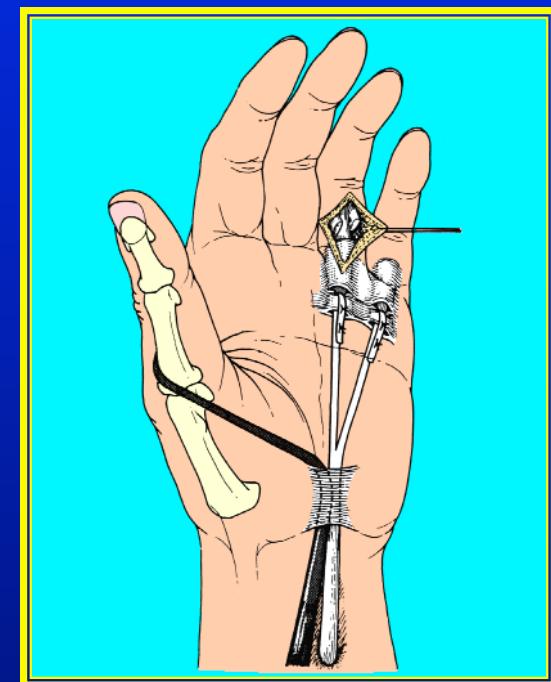

- Rerouted EIP
- EPB + MP fusion
- APB : 1band + graft
- (FS4 : 1 band + lasso)

Summary

Preferred method Distal palsy

- FPB paralysed
- FS4: thumb
EIP: lasso 4-5
APL (1 band) + graft : 1st DIO muscle
- (For stronger pinch:
FS4: thumb
FS5: lasso
EIP: 1st DIO)

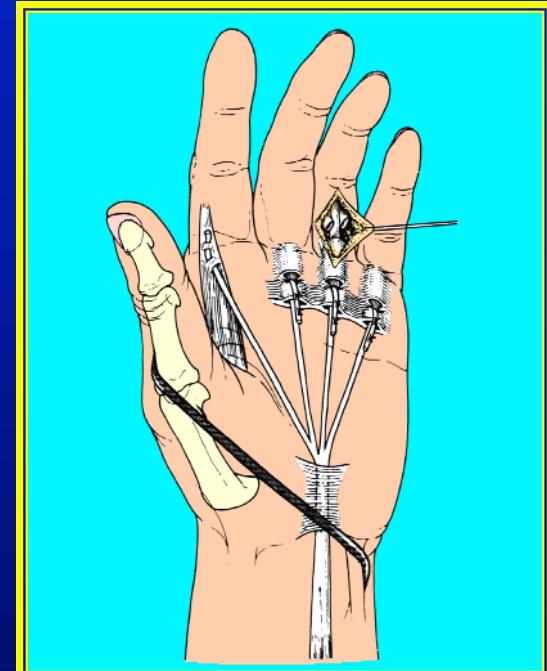

Preferred method Distal palsy

FPB active

EIP: thumb

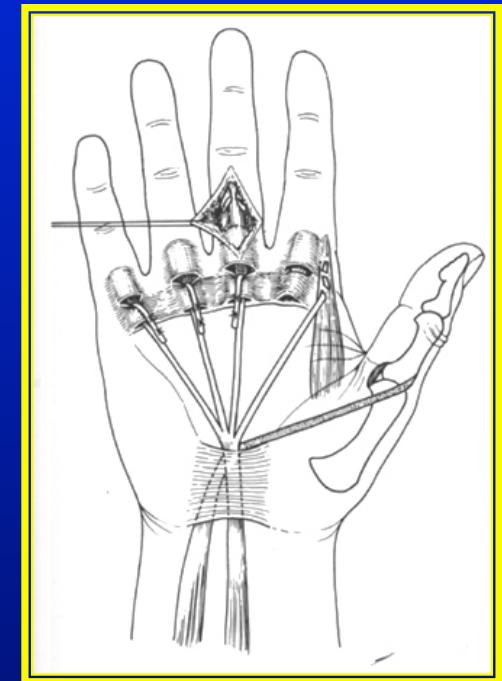

FS4 : lasso + 1st DIO muscle

Preferred method Proximal palsy

FP 4-5 : lateral suture to FP 2-3

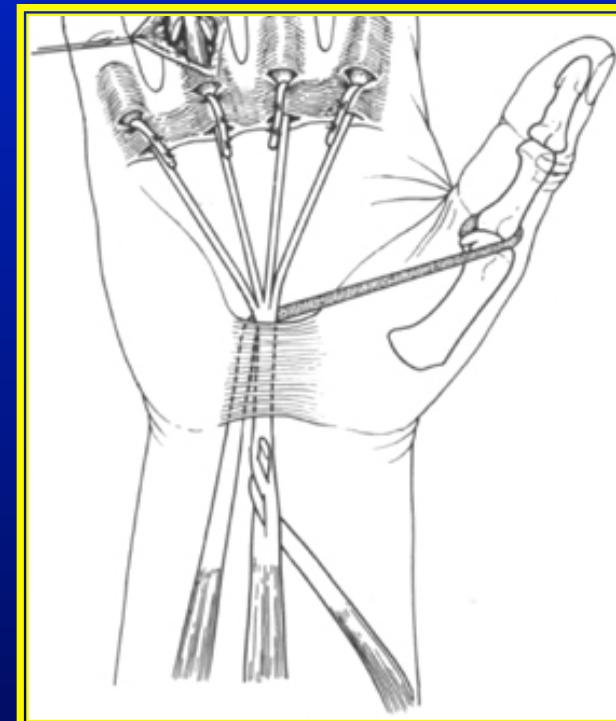

- 1st option
 - FS3 : lasso (3)-4-5 + 1st DIO muscle
 - EIP : thumb (+stabilization MP)

Preferred method Proximal palsy

FP 4-5 : lateral suture to FP 2-3

- 1st option
 - FS3 : lasso (3)-4-5 + 1st DIO muscle
 - EIP : thumb (+stabilization MP)
- 2nd option (strong finger flexion)
 - ECRL : indirect lasso 2-3-4-5
 - EIP : thumb (+stabilization MP)

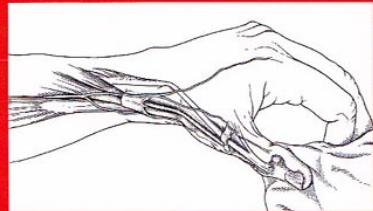

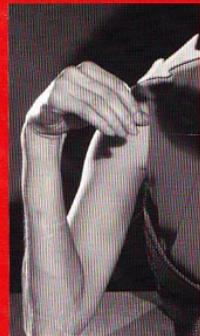

Conclusion

No standard procedure:

- Clinical examination (FPB)
- Patient's needs
- Surgeon's creativity and experience

Restoration of Function in Upper Limb Paralyses and Muscular Defects
